Instant Door & Window Reuse Components

There are 2 ways to use doors or windows in different versions of Sketchup, different computers, or different models:

1 Save and copy user styles as shown in the Styles tutorial.

2. Export door or window components after creating them as shown in this tutorial. (If you are using double walls both back and front components must be copied between models) This can be especially useful if you have edited the doors or windows after creating them and want to reuse them.

External Components	Click the External Components	s icon to display the' drop down list.	
	Instant Door Window	External Components Use External Doow Window Components	
Reuse Door Wind	ow Components	×	<
Select Option		Save Component Save Component Insert External Component Save Component to: Select Folder Insert External Component from: Select Folde [Export Components Folder] [Import Components from Folder] [Export Components to Other Sketchup] [Import Components from Other Sketchup]	

1 Save Component Saves the door or window (including back component if there is one) to a default folder in the InstantWindow Plugin folder. Click to display icons of the door and window components in your model. In this example I edited the muntins after running the plugin and made a custom door component. I choose it and click OK.

 INSTANT DOOR AND WINDOW Vali Architects Select Window or Door Component III VA_Opening#4 OK Cancel 	
Window and Door Types Vali Architects	 ×

1.1 Name the Component Give the door a name to save it as

Save Door Window Component				
Rename Component <mark>VA_Opening#4</mark>				
OK Cancel				
Save Door Window Component	×			
Rename Component My Door OK Cancel				

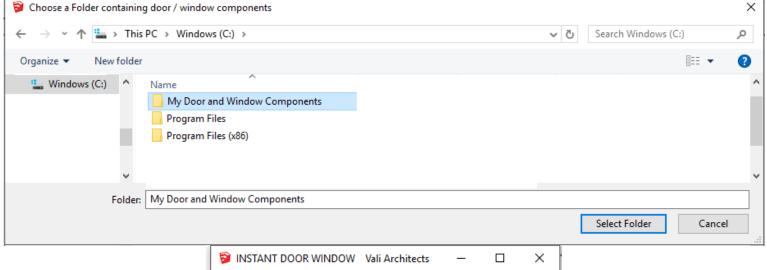

2 Insert External Component Now if I open another model, I can insert the door or window (including back component if there is one) from the default folder in the InstantWindow Plugin folder. Choose from the drop down list.

Reuse Door Window Components	×
Select Option OK Cancel	Save Component Save Component Insert External Component Save Component to: Select Folder Insert External Component from: Select Folde [Export Components Folder] [Import Components from Folder] [Export Components to Other Sketchup] [Import Components from Other Sketchup]
Vindow.sk My Window.sk OK Cance	

3 Save Component to: Select Folder Saves the door or window (including back component if there is one) as shown in section 1 above to a selected folder:

Choose a Folder to export the door / window component				×
← → ∽ ↑ 🏪 → This PC → Windows (C:) →	ٽ ~	Search Windows (C	:)	0
