

Instant Roof

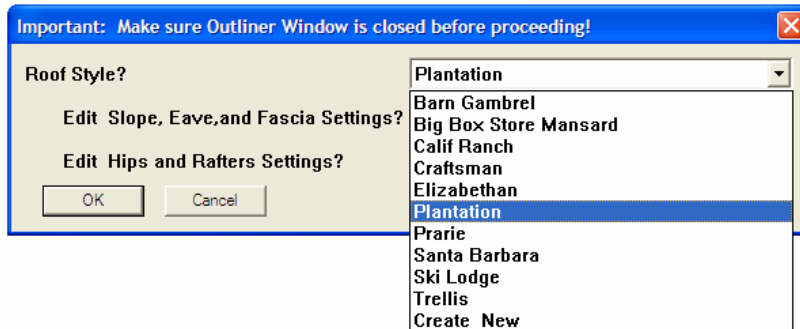

Example: Plantation Roof

A plantation roof is really just a style that includes a double slope. So it's fundamentally the same as a Gambrel style. As with other styles, Hip, Gable, or Shed Roofs can be generated. Here I make a Hip Roof.

1. Draw some geometry similar to below and select the top face. (Double Slope roofs must be drawn at a single level. If multiple levels are desired, select and generate them separately.)

2. Choose **“Plugins/ Instant Roof/ Make Roof”**. In the pop-up menu, choose **“Plantation”** from the **“Roof Style?”** pull down menu.

3. Choose **“OK”** to accept default parameters and generate the Plantation Hip roof:
